AMADEUS

The high-lift stacker

Born driverless

The AMADEUS-family is a result of 40 years of experience in the development of driverless transport systems. The AMADEUS forklifts accomodate laser navigation as well as the contour-based Navigation (SLAM). The AGVs can be offered with all different types of navigating systems and it is possible to integrate them into existing systems. The sensors for personal safety work without blind spots with unobstructed 360° degree view. It fits seamlessly in the new design of DS Automotion with a compact, rounded vertex. For the interaction with operators the AMADEUS-family offers a 10“ touch display and can also be equipped with voice output. Other features include - cameras for additional property protection, blue spot projectors, and a laser lane marker to avoid collisions with manual forklifts.
